

Please first identify which option is yours from the table. Then, please answer the questions corresponding to your option and upload it to the portal.

Note: I will not check or evaluate your submission if your choice does not match the table.

If you use ChatGPT, your work will not be accepted.

Web Server Programming

Midterm Question

Version A	Questions
ZAYNIDDINOV OGABEK	1. Explain the difference between client-side scripting and server-side scripting. Provide two examples of each. 2. Describe the HTTP request-response cycle and the roles of status codes (example: 200, 404, 500). 3. Write a PHP script that displays the current date and time in the format: Today is Friday, October 11, 2025, 10:00 AM. 4. Create a simple HTML form that takes a username and password and sends them to login.php using the POST method. 5. In login.php, write code to validate that both fields are not empty and print either "Login Successful" or "Missing credentials".

Version B	Questions
ABDUJALILOV JAMSHID	1. What is the difference between GET and POST methods in HTTP? When would you use each? 2. Explain what a web server and an application server are, and how they differ in handling requests. 3. Write a Servlet (Java) that handles a GET request and displays a personalized greeting, example: "Hello, Alice!" if name=Alice is in the query string. 4. Create a simple REST API endpoint (/api/hello) using Spring Boot that returns a JSON message: {'message': 'Hello from the server!'} 5. Write a simple HTML + JavaScript page that fetches data from /api/hello and displays the response on the web page.

Version C	Questions
KHAMIDILLAEV OTABEK	1. What is the role of middleware in web applications (in Express.js/ Spring Boot)? 2. Define session management and explain the difference between cookies and sessions. 3. Create an Express.js server with a single route /info that responds with 'Server is running on port 3000'. 4. Write a function in Node.js that logs the details (method, URL, timestamp) of each incoming HTTP request. 5. Implement a login route that checks credentials (username='admin', password='1234') and returns 'Welcome Admin' or 'Access Denied'.

Version D	Questions
SHUKIRILLAEV	1. What are the main components of a RESTful architecture? Explain the principles of REST. 2. Explain the concept of statelessness in HTTP and why it is important in web applications. 3. Write a Spring Boot controller that accepts a POST request at /register with a JSON body containing name and email, and returns a confirmation message. 4. Create a simple HTML form to register a new user (fields: name, email) that sends the data to /register using fetch () and JSON. 5. Implement server-side validation: return error message if email is missing or invalid.

Version E	Questions
KHASANOV SAYFILLO	1. Explain the Model-View-Controller pattern used in web frameworks. Provide an example for each component. 2. What are HTTP headers, and how do they help manage requests and responses? Give two examples. 3. Write a PHP script that connects to a MySQL database and retrieves all rows from a students table, printing them in an HTML table. 4. Create a Node.js REST API endpoint /students/:id that returns student data in JSON format. 5. Build a simple frontend HTML/JS page that sends a GET request to /students/1 and displays the returned data.
